Fax
Email **damlame@yahoo.com**

Diagnosis and Recommendations

Host/Habitat	Garlic (Allium sativum); Cultivar: Persian Tempest, Carpathian, Romanian Red, Persian Star
List of Diagnosis/ID(s)	
Not Detected for Stem and bulb nematode (Ditylenchus dipsaci)	
Confirmed for No pathogen found (No Detection)	

Final Report

Thank you for submitting a sample to the Plant Disease Diagnostic Laboratory for Garlic Bloat Nematode (*Ditylenchus dipsaci*) determination. Our hope is that this service reduces the importation and spread of this destructive nematode. A fact sheet on the Garlic Bloat Nematode (*Ditylenchus dipsaci*) is available at: http://umaine.edu/publications/1205e/

This sample tested **negative** for Garlic Bloat Nematode (*Ditylenchus dipsaci*). While this sample was negative, please realize that these results do not necessarily mean that your entire crop is free of Garlic Bloat Nematode but rather the sample that was submitted for testing had no recovery of the nematode.

These test results do not constitute a certification of your crop and should only be used as a diagnostic tool.

Additionally, there were no symptoms or signs of White rot caused by *Stromatinia cepivora* or Botrytis neck rot caused by *Botrytis porri* on the sample you submitted.

Plant Disease Diagnostic Lab Pest Management Unit 17 Godfrey Dr. Orono ME 04473	Diagnosed By : Emma Herrero(emma.herrero@maine.edu), Dr. Stephanie Shea (stephanie.shea@maine.edu) Completed Date: 7/28/2025
